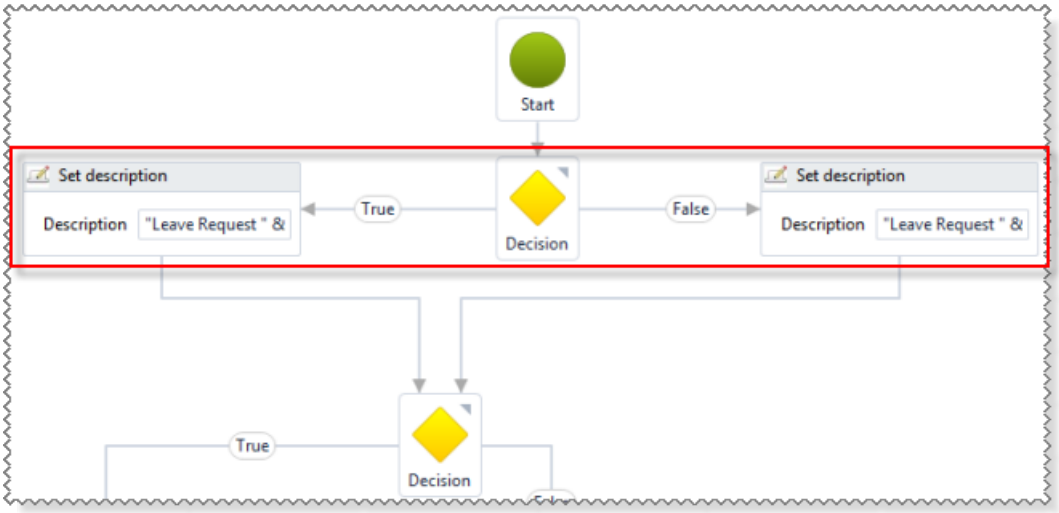
Miscellaneous 4.0.2 changes

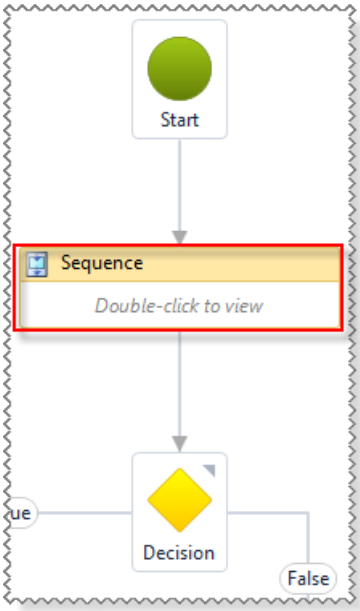
Use this option for customers who have a customised leave process flow.

This topic explains the changes that you need to make to an ESS 4.0.1 *LeaveRequest* process flow so it includes the ESS 4.0.2 functionality. These changes may conflict with customisations that have already be made to the process workflow, so ensure that both sets of changes will work together.

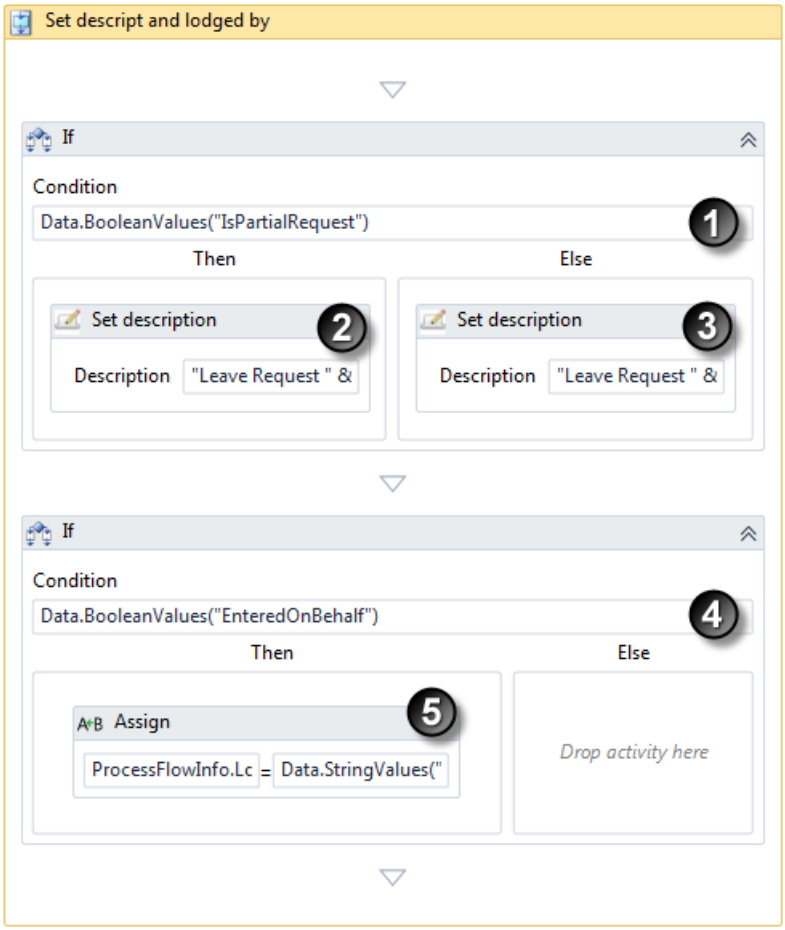
1. Start Workflow Designer.
2. Navigate to **Leave** | **Process Flows** | **LeaveRequest**.
3. Double-click the process flow to edit it.
4. Delete the following activities.



5. Drag and drop a **Sequence** activity to the area where you deleted the activities from, and connect it to the workflow.

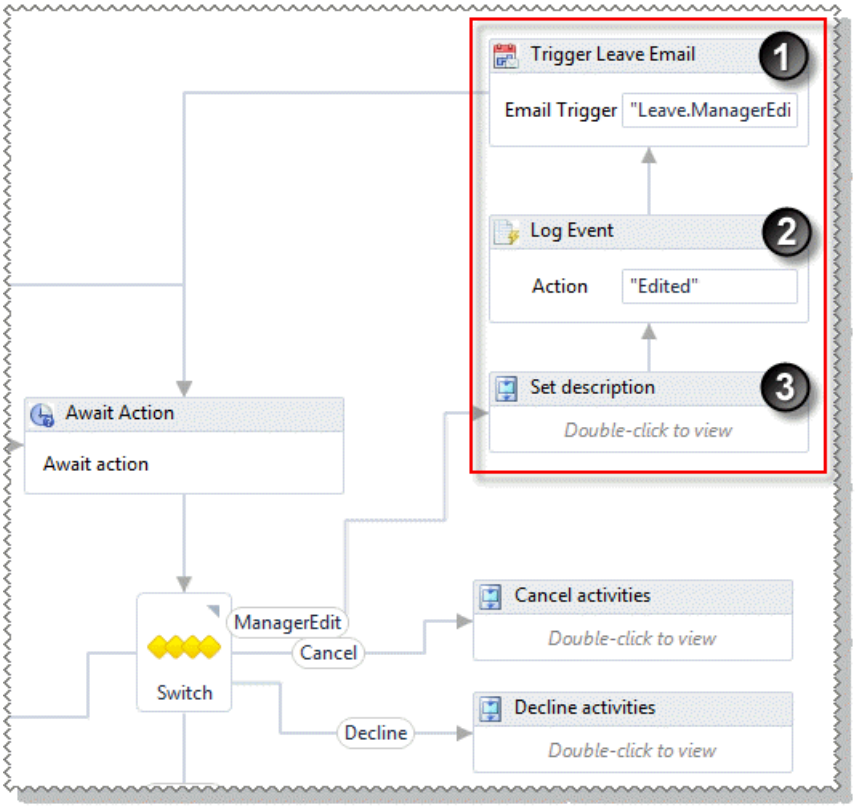


6. Double-click the **Sequence** activity.
7. Complete the Sequence activity as shown below.

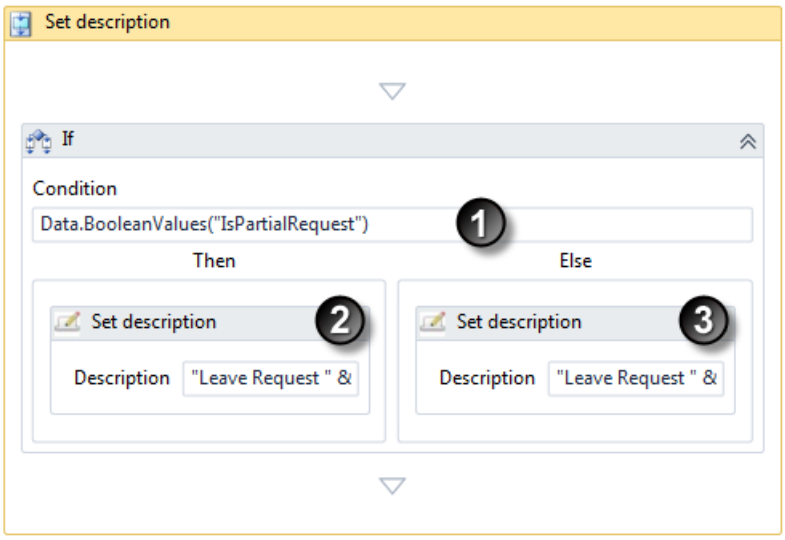


1	Data.BooleanValues("IsPartialRequest")
2	"Leave Request " & Data.DateValues("StartDate")
3	"Leave Request " & Data.DateValues("StartDate") & " - " &Data.DateValues("EndDate")
4	Data.BooleanValues("EnteredOnBehalf")
5	ProcessFlowInfo.LodgedByCode = Data.StringValues("EmployeeCode")

8. Scroll down to the first Switch.
9. To allow managers to edit unapproved leave, add a *ManagerEdit* path to the process flow as shown below. Ensure that you name the path from the switch **ManagerEdit**.

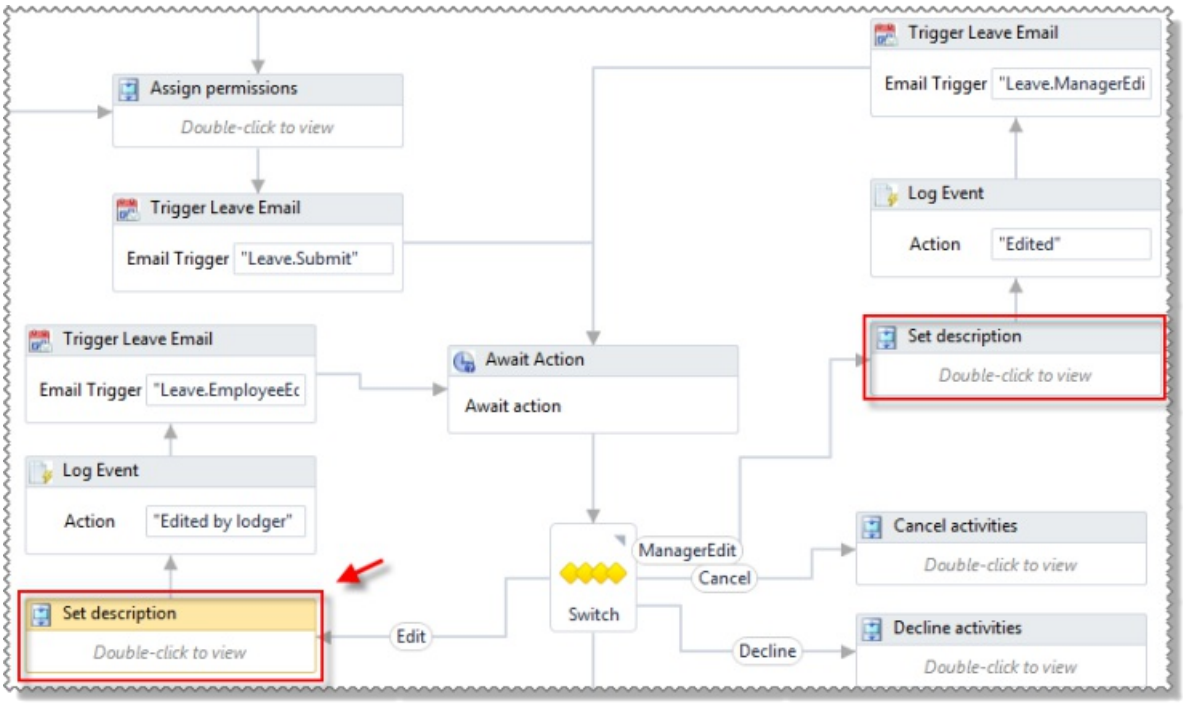


1	"Leave.ManagerEdit"
2	"Edited"
3	Sequence shown expanded below.

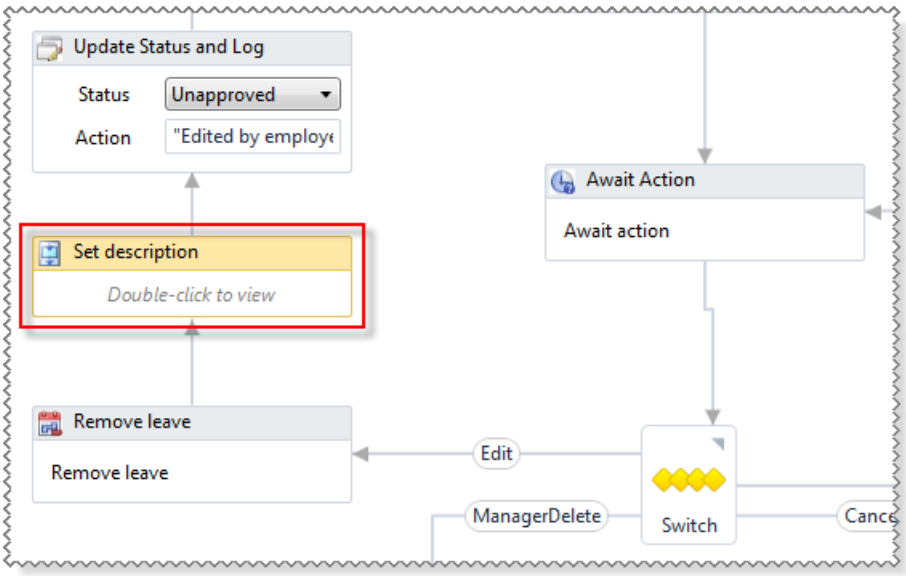


1	Data.BooleanValues("IsPartialRequest")
2	"Leave Request " & Data.DateValues("StartDate")
3	"Leave Request " & Data.DateValues("StartDate") & " - " &Data.DateValues("EndDate")

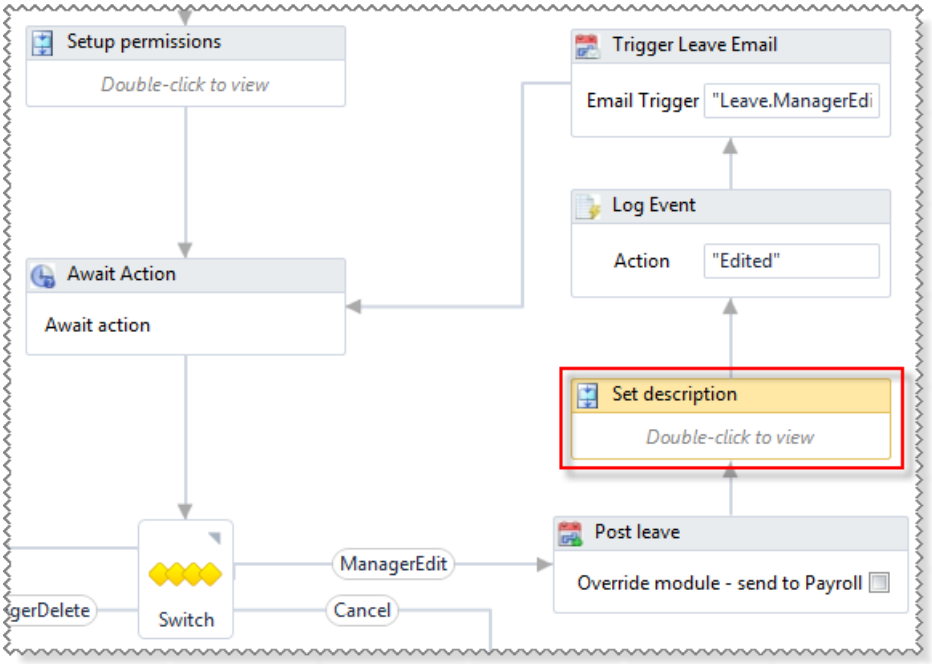
10. Copy the *Set description* sequence that you added to the *ManagerEdit* path. You need to paste the sequence to three areas of the process flow.
    - Paste it at the beginning of the employee's *Edit* path (left of the first Switch) and connect it to the workflow.



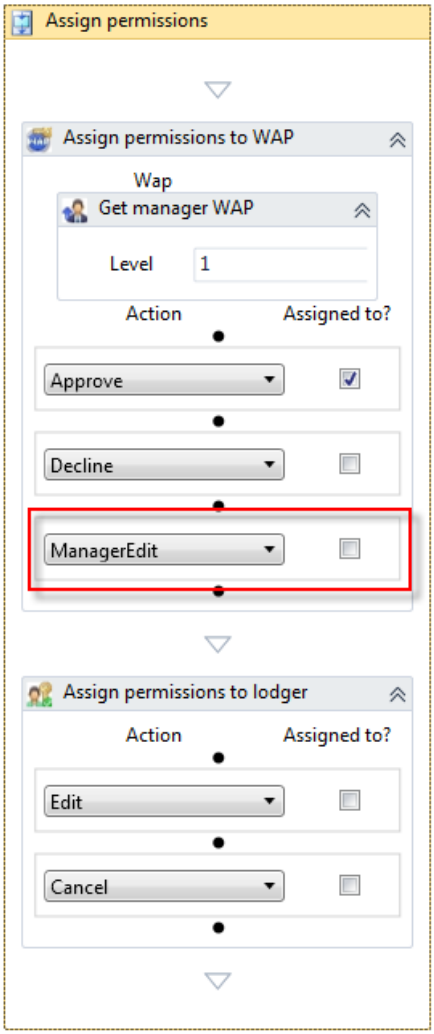
- Paste it after the *Remove leave* activity in the employee's *Edit* approved leave path (left of the second Switch) and connect it to the workflow.



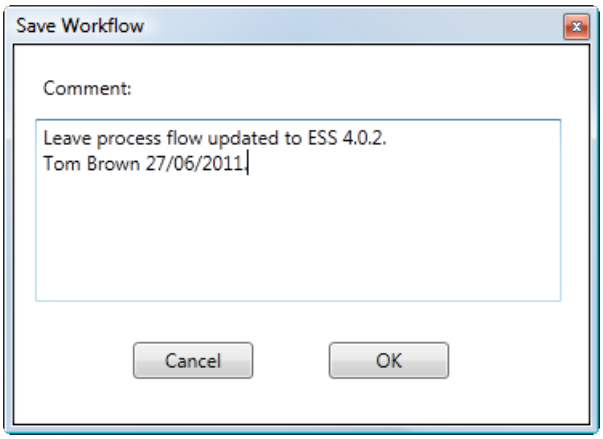
- Paste it after the *Post leave* activity in the manager's *ManagerEdit* approved leave path (right of the second Switch) and connect it to the workflow.



11. Scroll up and double-click the **Assign permissions** activity (left of the second Decision).
12. Add an **Assign permission to WAP** activity and change to *ManagerEdit*.



13. In the main menu, click **Workflow** | **Save and Exit**.
14. Type a comment and then click **OK**.



If the customer will use the Leave Uploader, then you also need to make additional changes to the process flow (see Workflow - Update process flow for Leave Uploader).
